## From President & CEO, Mark Windover:

Dear Partner,

Thank you for a very productive and safe 2009. 2009 marked a year where ELSAG, NA raced past the 500 agency mark ending the year with well over 600 in 50 states.

We are most proud of all of your examples of terrific police work, supported by our exciting ALPR technology. As a company, we continuously evolve to meet the everchanging demands of your mission.

We have adapted our Hardware and Software to your needs and always welcome your feedback.

Recently we pushed our cameras to the limits with a series of punishing tests to reinforce the mission readiness and durability of our technology.

In the coming months you will also be hearing more and more about the advantages of the MPH-900's Digital ALPR technology versus others' analog technology. The differences are substantial.

Please encourage your team to take advantage of our 24/7 tech support at 1-8669MPH900 or 1-8669674900 or 3363797135 for our many friends outside of the US.

Thank you for your support.

All the best,

Mark

## AS SEEN at [www.usatoday.com](http://www.usatoday.com)!

Read how law enforcement agencies across the country are benefitting from the MPH-900® Automatic License Plate Reader. The system's digital capabilities make it the most advanced, most accurate ALPR technology available.

## Captured!

Five days after Patricia Howard and Timothy Carter were found murdered in Howard's home, authorities in Broome County, NY located and captured the double-homicide suspect near Binghamton, NY on February 5. Police found Anthony Pavone of Morrisonville at a motel when the digital MPH-900® ALPR system on their car read the license plate on the suspect's truck, confirming it was wanted in connection with the homicide. After a four-hour standoff, Pavone surrendered without incident and has since plead guilty.

## MPH-900® ALPR Cameras: The Most Durable On The Market

Accuracy and dependability are the two most important characteristics of the Mobile Plate Hunter-900® Automatic License Plate Recognition technology. We put our products through rigorous quality control measures to ensure they operate at peak performance day after day, assisting your public safety missions.

Recently, ELSAG implemented a new series of tests, which mimic the real-life situations its MPH-900® cameras might face while deployed. The results while not surprising to us are very impressive. From hard and heavy impact to water submersion to bullets and more, our MPH-900® cameras stand up to extreme conditions, providing you the most dependable ALPR performance available.

Take a look for yourself at the durability of our USA-made cameras. For more information about how the MPH-900® ALPR technology can become a force multiplier in your agency, call 866.9.MPH.900.

## Welcome Northeast Ohio!

We are proud to support the Summit County Emergency Management Agency/Division of Public Safety. They are deploying the real-time operations and accuracy of the MPH-900® digital ALPR in across nine counties in their area to assist with vehicle-related crimes and infractions.

## Word On The Street

"We were able to not only obtain from the LPR photo the License Plate number, but also unique identifying features on the front of the vehicle that enabled us to place the defendant's car at the scene of the crime."

- *Dutchess County, NY District Attorney William Grady*
